JIAWEI YU

GAME DESIGNER

Oakville, ON
Email: jwyu0006@gmail.com
Portfolio: jwyu0006.github.io/
LinkedIn: linkedin.com/in/jiawei-yu-4515043bb/

PROFILE

Game design student at Sheridan College (graduating April 2028), seeking a 4-month co-op from May to August 2027. I design gameplay systems and levels, prototype them in Unreal Engine with Blueprint and C++, or Unity with C#, and test them with players and telemetry.

EDUCATION

Honours Bachelor of Game Design
Expected: Apr 2028

Sheridan College | Oakville, ON
Cumulative GPA: 3.59

SKILLS

Design:
Game Design, System Design, Level Design, Technical Design, Balancing (Excel, Monte Carlo), Agile, Scrum, Playtesting, Telemetry

Engine & Code:
Unreal Engine (Blueprint, C++, UMG), Unity (C#), UEFN, FiveM (Lua)

Tools:
Jira, Miro, Figma, Excel, GitHub, 3ds Max, Maya, Blender, Substance 3D Painter, ZBrush

PROJECTS

Voice in the Void | Systems & Level Designer, Sprint Lead | Unreal Engine 5
Jan 2026 - Apr 2026

https://jwyu0006.github.io/project.html?id=vitv-systems

- Designed game systems for a point-and-click game: surveillance-camera views that make the player feel watched, iterating from fixed shots to player-following cameras with a dead zone to remove jitter, click-to-move navigation, and trigger zones that drive camera switches and dialogue.
- Designed and built the levels and placed and tuned every camera.
- Specified each system's structure and interfaces so programmers could build them in parallel with design.
- Designed telemetry that logged clicks, character position and time.
- Led sprint planning in Scrum: wrote user stories, built the schedule, assigned tasks, and established standard workflow.
- Modeled the 3D characters.

Procedural Planet Generation | Programmer | Unreal Engine 5, C++
Sep 2026 - Present

https://jwyu0006.github.io/project.html?id=procedural-planet

Building a procedural planet in C++ with the Dynamic Mesh framework, featuring runtime mesh generation with adjustable resolution, collision, and custom gravity for walking on the surface.

Dentist Game | Designer & Developer | Design Week, Unreal Engine 5
Mar 2026

https://jwyu0006.github.io/project.html?id=dentist-game

- Designed a mouse-driven tooth extraction mechanic: loosen the tooth with slow side-to-side movement, keep its random tilt upright, then pull it out; overshooting or tilting too far costs health.
- Built all gameplay and UI in Blueprint in two days of development, tuning the tooth's inertia, acceleration and tilt so the controls felt tense but fair.

EXPERIENCE

3D Environment Artist
Nov 2022 - Jun 2023

ArtCoding | Wuhan, Hubei, China
http://www.art-coding.com/

- Produced and optimized game environment assets across the full pipeline (modeling, sculpting, retopology, UVs, baking, texturing), reducing polygon counts and improving UV layouts to meet production specs.
- Revised assets through lead feedback cycles to meet technical and visual standards on schedule.
